

# PLEASE HELP!

Bob needs a cure... It Could Be You!

## SAVE BOB

A **FREE** and **SIMPLE** test of your saliva will tell you if you can **SAVE A LIFE** by becoming a bone marrow or stem cell donor.

Testing is not always **FREE** (usually \$52 per person) so this is an enormous opportunity to **help** our family and families with similar circumstances find a cure. Each person needs a different cure; **Bob's cure could be you!**

We are **praying** that everyone gets a match, but you need to take the **FREE** test to find out if you can **SAVE A LIFE**.

With faith,  
*Bob and Family*

On August 5th, 2005 **Bob** Dargenio age 37 was diagnosed with Acute Myelogenous Leukemia. After 9 months of Chemotherapy and an autologous transplant (his own stem cells) the **hope** was that Bob would be able to watch Emma, his 8 year old daughter grow up.

April of this year Bob's Leukemia returned and right now he **needs** a transplant of marrow or stem cells from a **donor like yourself** to realize that second chance at life. You might be the match Bob is desperately seeking.
